About Kinetic Leather

Kinetic leather is handcrafted with individual characteristics which make each hide unique.

Beyond long-lasting durability, our leather develops a personalized shade and texture.

Kinetic leather is the perfect fit with its versatility, ease of maintenance and stylish design.

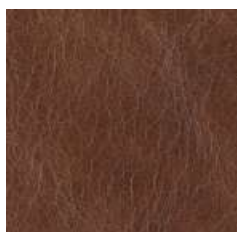

Types of Leather

The type of leather is distinguished by distinctive characteristics and hence, varied maintenance methods are required.

FULL ANILINE

Full aniline, the finest leather available, exudes a beauty like no other. The amount of treatment such as colour or protective pigments used is minimal, showcasing natural markings and colour differences. The luxurious aniline is the most demanding to upkeep.

ANILINE PLUS

Aniline plus hides are similar to pure Aniline leather, except that they are treated with an additional protective finish to prolong the colour lifespan. The grain remains unchanged, highlighting natural features and patterns.

PROTECTED

Lightly buffed and pigmented to ensure consistency in colour and texture, protected hides are durable and resistant to stains. This makes the leather extremely friendly to families and suitable for frequently used furniture in the home.

NATURE'S SIGNATURE

Naturally formed marks and variations are inherent in leather.

It adds beauty and serves as mark of authenticity.

Vein marks
are obvious cool
marble-like patterns

Horn butts and scraps
are scars caused by horn
fighting

Scar marks
are caused by various
reasons, scraped or
bruising

Colour variation
occurs during the dyeing
process as different parts of
the hide absorbs the dye in
varying amounts

Wrinkles
normally appear
when thick leather is
bent back on itself

Neck lines
are mild creases typically
found in the neck and
shoulder area where
loose skin is located

Grain variation
is leather obtained from
different parts of the
animal causes
inconsistency in grain
patterns

Grub marks
are caused by larvae
penetrating the hide
resulting in swelling and
hide perforation

**Recovered scar
marks**
causes grain line to be
faint

Belly
skin is thin – stretch
marks and marble-like
patterns forms easily

Insect Bite Marks
such as ticks, mosquitoes
and other bug bites show
themselves as tiny spots

Stretch marks
appear when the animal
grows quickly or gets really
fat for a time in life

BV

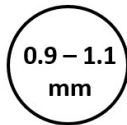

Bovine

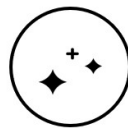

A fully corrected leather. It is buffed and embossed, with a layer of protective coat applied to enhance colour uniformity and stain resistance. For the pleasure of owning genuine leather, plus the promise of performance, Bovine is the perfect choice. It is offered in a wide colour palette.

NUDE

SK

Silky

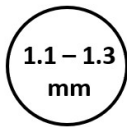

Silky is an exquisitely soft full grain aniline drum dyed leather, with a mild two-tone spray effect on the finishing coat. Its smooth finish and polishing effect gives an incredibly fluffy soft and rich supple warm feel with varying natural milled grain texture.

Color shading varies from hide to hide due its aniline finishing, which adds to the natural characteristics of the leather.

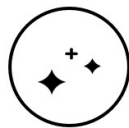

Handling of this leather is very important, as it is sensitive to scratches due to very light surface protection.

Leather Care And Maintenance

Cleaning:

- Dust regularly use a clean, dry and non-abrasive cloth or use a vacuum cleaner with a small brush attachment.
- For water soluble stains and grease stains, remove the stains IMMEDIATELY from the surface with absorbent cloth or paper towel. Clean stains in a circular movement, working from the outside towards the center gently.
- Use only HTL approved leather care kit for leather maintenance
- Use of water and/ or other solution is not recommended and should be not be part of your regular cleaning routine.
- For **Nubuck & Suede leather**, use the same procedures described as above. Buff delicately using a dry cloth after the leather has been cleaned and dried, to restore the Nubuck effect.

Tips for proper leather care:

- Dust your leather sofa using a soft duster or a dry and non-abrasive cloth weekly or when necessary.
- Use Leather Protection Cream to condition the leather every 3 – 6 months.
- Use leather cleaning solution to remove stubborn grime and dirt. Avoid excessive force and dry immediately.
- Never use leather cleaning solution for Aniline leather.
- Each type of leather requires individually professional leather care products, so take care when making the appropriate selection. Please refer to below types of leather:
 - Aniline leather – **‘FULL ANILINE’ / ‘ANILINE PLUS’**
 - Pigmented leather – **‘PROTECTED’**
 - Nubuck & Suede leather – special **‘FULL ANILINE’**
 - Oil & Wax Pull-up Leather - special **‘FULL ANILINE’ / ‘ANILINE PLUS’**

WARNING:

- Avoid using water or any cleaning solution on leather as it can cause leather's protective finish to wear off.
- Always keep leather surface dry. Avoid direct sweat contact.
- Never use the following products or products containing these ingredients on leather. They may result in leather peeling, cracking and discoloration
 - ◆ soap, toothpaste, perfume, nail polish, makeup remover, various ointments, lotion or liquid products not meant for leather;
 - ◆ Any kinds of chemical, oil, detergent, bleach and other cleaning products;
 - ◆ petroleum, alcohol, menthol, camphor, liquid paraffin, butanone, acid, alkali, ethers, ketones, benzene, and other similar substance.
- Place the sofa at least 50cm from any heat source such as hair dryer, heaters or radiators.
- Do not expose your sofa to direct sunlight or strong light source to preserve the colour of the covering.
- Be careful with highly pigmented clothings (e.g. dark denim).
- Keep sharp objects such as buckles, keys and toys away from leather furniture.
- Use of products not recommended by HTL will void warranty.
